**Walnut Creek, CA USA** — Dynatrek, Inc. (headquartered in the Yurakucho district of Tokyo, Japan's), a developer and marketer of integrated business information systems that are based on a US-and-Japan patented "Virtual Database" technology, and Formtek, Inc. (headquartered in California), a leader in the development of advanced Enterprise Content Management (ECM) software, today announced that they have signed a partnership agreement. As part of this agreement, Dynatrek and Formtek will introduce in 2006 an integrated system for use within Japanese government agencies that synergistically combines components from both Formtek's Document Management System and DynaTrek's Integrated Business Information System.

DynaTrek provides their advanced "DynaTrek" database integration tool for aggregating data across distributed heterogeneous database systems to government and municipal agencies, large financial corporations, and large communications companies. Unlike existing data warehousing technology, DynaTrek can provide real time answers to end user's questions because data does not need to be duplicated. No matter what format or database application was used initially to store the data, DynaTrek's unique algorithms allow dynamic location, recognition, transformation, integration and aggregation of the data. "With the partnership between DynaTrek and Formtek, our clients can get the data they need to make critical corporate decisions without needing to know the structure of the data source. Further, as part of this cooperation, by integrating Formtek | Orion 5 and DynaTrek's virtual database technologies, it will be possible to effectively aggregate data distributed across an entire company." said Joji Saeki, DynaTrek's Chief Executive Officer.

-more-

“Formtek | Orion 5 ECM products and business solutions target the organization and search for unstructured data. DynaTrek’s virtual database technology complements Formtek technology by providing a foundation that allows relationships to be easily created between unstructured data and the structured data of standard business applications. These kind of data inter-relationships can magnify the business value of the individual structured and unstructured data components many times over,” said Dick Weisinger, Formtek’s Chief Technologist.

**About DynaTrek.** DynaTrek introduces their customers to advanced technology and development by integrating heterogeneous distributed databases and business information. The “DynaTrek” product is being used in enterprises as part of CRM, KM, and consolidated accounting and management systems.
