

Alfresco Image Management

100% Open Source

Electronic image capture and management enables organizations to transform from manual, paper-based handling to efficient business process driven, electronic access. This is often driven by the need for compliance, better customer service and increased business efficiency.

Paper, fax and email need to be digitized at the point of entry into the organization and stored and related to other information to provide a complete view of, for example, a customer or a case. Image management is often used in combination with document management and business process management to deliver applications such as:

- Inbound paper mail management
- Inbound invoice and billing management
- Inbound contracts and forms management
- Risk mitigation
- Case Management
- Customer management

Traditional Image Management and Capture

Traditionally, image management has been driven by proprietary vendors with closed products that are often closely coupled to one particular type of capture software. This approach has created an industry with costly software, where much of the logic is hard-coded into the script between the capture and image management software, making it inflexible. Also, distributed capture often requires holes in firewalls to be opened causing a security risk.

Simple Image Capture and Kofax Ascent Capture Integration

Alfresco allows images to be simply captured through its shared drive CIFS interface with automatic meta-data extraction and classification. For high-volume, sophisticated image capture, Alfresco is integrated with the Kofax Ascent Capture product. This industry leading capture solution offers:

- Automatic image correction and enhancement
- Automatic form identification and document separation
- OCR, ICR and OMR to recognize machine-printed and hand-printed text in hundreds of languages, as well as bar codes, patch codes and check boxes
- Certified to work with most production scanners
- Integrates seamlessly with Alfresco Content Management and Business Process Management

Alfresco Image Management

- Enterprise and departmental image storage
- Single repository
- Store any digital asset
- Standards include JSR-170, Web Services, REST
- High availability, scalability
- Secure, distributed Capture
- Reuse of Alfresco rules
- Transformation
- Meta-data extraction and management
- Classification framework

Simple Image Capture

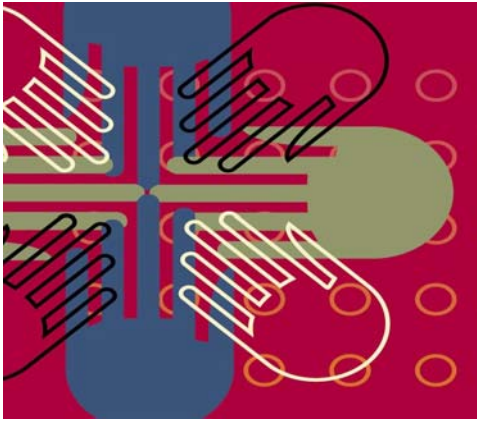

- Simple drag and drop interface
- WebDAV, FTP

Kofax Ascent Capture Integration

- Automatic image correction and enhancement
- Automatic form identification and document separation
- OCR, ICR and OMR, as well as bar codes, patch codes and check boxes
- Certified to work with most production scanners
- Integrates seamlessly with Alfresco

Alfresco offers a single integrated repository to manage all types of content across image management, document management, records management and email repositories. The repository is a modern platform with:

- One repository for any digital asset
- The industry's most scalable, standards-based, JSR-170 content repository
- Standards support for JSR-170, Web Services and REST
- High-availability, fault tolerance and scalability
- Auto fail-over and clustering
- Secure distributed capture over Web Services, HTTP and HTTPS
- Reuse of Alfresco Business Policy Rules
- Server-based transformation between many formats including TIFF, JPEG, GIF, PNG, MS Office, PDF, and FLASH
- Metadata extraction and management
- Automatic classification framework

User Functionality

Users get a simple to use, integrated image management system that is as straightforward as a shared drive. It has functionality with:

- Powerful location, attribute and category search
- Automatic email and RSS notification
- Flexible workflow – simple folder based workflow and sophisticated jBPM integration with dashboard access for task management
- Image rollover preview
- Image format management

Benefits

- Cost – Low Total Cost of Ownership single integrated, highly scalable, high-availability ECM platform
- Cost – Preserve investment in existing operating system, database, application server, and high availability infrastructure
- Enhanced Customer Service – Integrated customer view of all related correspondence. Highly scalable, high availability ECM platform for rapid, reliable customer response
- Choice – Standards-based content management using JSR-170, JSR-168, ODF, Web Services and REST
- Enterprise-Wide Compliance – Common governance framework with integrated business process management and service oriented auditing
- Quality – Single enterprise-wide repository

About Formtek

For over two decades, Formtek has been providing mission critical Enterprise Content and Content Management solutions and services to some of the most demanding industrial operations in the world. Our capabilities and experience, particularly in the areas of engineering drawing management, technical Content management, and secure collaboration, have helped both small organizations as well as large global enterprises manage their most important information assets. Formtek solutions address real, day-to-day Content management, content management, and records management requirements for worldwide customers in manufacturing, aerospace, defense, telecommunication, utility, and government.
